II INDIVIDUALS-LEVEL VARIABLES								
DEMOGRAPHIC CHARACTERISTICS								
Some inconsistencies were detected across rounds in paneled observations. Only some cases could be corrected, particularly in time-invariant characteristics, however the most appropriate method to deal with the rest was left to the user's judgement.

		2009	2014					
<div>The section on migration follows the history of the individual's migration since before 2009 and between 2009 and 2014. It starts by a harmonized part in both survey years on intention to travel abroad. In 2009, the migration history covers the period before the survey year, while in 2014, it covers that between both survey years (2009 and 2014). Therefore, the first set of harmonized variables is available in both data files. While the set covering immigration experience during the years before 2009 is only available in the 2009 survey data, and thus that covering the period between 2009 and 2014 is only provided in the 2014 survey data. Missing reponses in harmonized variables in 2009 are for individuals aged 17 years or younger. Those are having reponses in 2014 since they became part of the sample in the variables' universe.</div>
