## **Acknowledgment**

**The success of the Palestinian Labour Force survey program would not be possible without enthusiastic cooperation and support from households selected in the successive rounds of the survey sample.**

**This Palestinian Labour Force Survey program (PLFS) is supported by a generous grant from the Government of Switzerland through the Swiss Development Cooperation (SDC).**

**The Palestinian Central Bureau of Statistics (PCBS) wishes to Ms. Anick Tonti from the SDC and Mr. Farhard Mehran from the ILO for their help in making the PLFS a reality.**

## **Note for Users**

1. Persons who work in Israel and were absent from work due to Israeli closure are considered unemployed, and also those persons never work and not looking for work but waiting to return back to their works in Israel and Settlements.
2. The Palestinian Territory were diversified into a group of administrative parts, for dissemination purposes, grouping of districts to Governorates and Governorates to another as follows: Jenin & Tubas districts, Tulkarm & Qalqiliya, Nablus & Salfit districts, Bethlehem & Jericho, no change on other Governorates.
3. A comprehensive revision for the sample weights has been made, using the most recent population estimates, and the demographic structure of the population; distribution by age and sex, in addition to distribution according to place of residence.
4. (-) in tables means observations are too small.

## **Preface**

The Palestinian Central Bureau of Statistics is pleased to present the seventh annual report on the Palestinian Labour Force Survey Programme. This programme consists of an integrated series of labour force surveys, the first one issued in October 1995. The Palestinian Labour Force Survey Programme conducts surveys quarterly.

The main objective of collecting data on the Palestinian labour force including components of employment, unemployment and underemployment, is to provide basic information on the relative size and structure of the Palestinian labour force. Data collected at different points in time provide a basis for monitoring current trends and changes in the labour market and in employment. These data supported with information on other aspects of the economy provide a basis for the evaluation and analysis of macro-economic policies.

This report provides data on labour force, covering standard classifications, economic activity, occupation, employment status, and other related variables, as well as the demographic characteristics of the work force (population aged 15 years and above).

We hope that this report will provide Palestinian planners, researchers and decision makers with revised and accurate statistical data on the Palestinian labour market.

**April, 2003**

## Chapter One

### Introduction

#### **1-1 Survey Objectives:**

The main objective of collecting data on the labour force and its components, including employment, unemployment and underemployment, is to provide basic information on the size and structure of the Palestinian labour force. Data collected at different points in time provide a basis for monitoring current trends and changes in the labour market and in the employment situation. These data, supported with information on other aspects of the economy, provide a basis for the evaluation and analysis of macro-economic policies.

#### **1-2 Report Structure:**

This report consists of five chapters. The first chapter presents a background on the labour force survey programme and survey objectives. The second chapter presents the main definitions used in developing the questionnaire and other research tools, in addition to data collection and tabulation. The third chapter presents the main findings: labour force key indicators, main characteristics of the employed, unemployed, underemployed and persons outside labour force, labour force according to level of education, distribution of the employed population by occupation, Economic Activity, place of work, employment status, hours and days worked and average daily wage in NIS for the employees.

The fourth chapter discusses the methodology used in the survey, including questionnaire design, sampling frame, sample design and sample weights calculations. This chapter also describes the recruitment and training of interviewers and supervisors, fieldwork operations, data processing, coding and editing after data entry and tabulation.

The fifth chapter includes a descriptive assessment of data quality, including non-response rate and its components.

## Chapter Two

### Concepts and Definitions

This chapter presents the main concepts and definitions used in the survey. These concepts are based on the international standards taking into account the Palestinian labour market's circumstances.

**Household:**

One person or a group of persons living together who make common provision for food or other essentials for living. Household members may be related, unrelated, or combination of both.

**Population of working age:**

All persons in the West Bank and Gaza Strip aged 15 years and over.

**Reference week:**

The week ending on Friday preceding the interviewer's visit to the household.

**Work:**

Includes any activity for wage or salary, for profit or family gain, in cash or in kind. One hour or more of such activity constitutes work. Work also includes unpaid activity on a family farm or business.

**Employed:**

All persons are 10 years and over who were at work at least one hour during the reference week, or who were not at work during the reference week, but held a job or owned business from which they were temporarily absent (because of illness, vacation, temporarily stoppage, or any other reason). Employed persons are classified according to employment status as follows:

**1. Employer:**

A person who operates his or her own economic enterprise or engages independently in a profession or trade, and hires one or more wage employees.

**2. Own-account worker (self-employed):**

A person who operates his or her own economic enterprise or engages independently in a profession or trade, and hires no employees.

**3. Employee:**

A person who works for a public or private employer and receives remuneration in wage, salary, commission, tips, piece-rates or pay in kind.

**4. Unpaid family member:**

A person who works without pay in an economic enterprise operated by a related person living in the same household.

**Unemployed (According to the ILO Standards):**

Unemployed persons are those individuals 15 years and over who did not work at all during the reference week, who were not absent from a job and were available for work and actively seeking a job during the reference week. Persons who work in Israel and were absent from work due to closure are considered unemployed, and also those persons never work and not looking for work but waiting to return back to their works in Israel and Settlements.

**Unemployed (According to the Relaxed Definition):**

The Number Of Unemployed Persons was calculated under the definition by adding to unemployed Persons according to the ILO Standards, those Persons outside labour force because they were frustrated.

**Labour force:**

The economically active population (Labour Force) consists of all persons 15 years and over who are either employed or unemployed as defined over at the time of survey.

**Underemployment:**

Underemployment exists when a person's employment is inadequate in relation to alternative employment, account being taken of his/her occupational skills. The underemployed persons are classified into two groups:

**1. Visible underemployment:**

Visible underemployment refers to insufficient volume of employment:

persons worked less than 35 hours during the reference week or worked less than the normal hours of work in their occupation were considered as visibly underemployed.

**2. Invisible underemployment:**

Invisible underemployment refers to a misapplication of labour resources or fundamental imbalance as between labour and other factors of production, such as insufficient income, underutilization, or bad conditions of the current work, or other economic reasons. In this survey, employed persons are classified as invisibly underemployed if they are not already classified as visibly underemployed; and want to change their jobs because of an insufficiency of income, or because they are working in an occupation which does not correspond to their qualification.

**Main job:**

The job at which the person usually works the most hours in his/her main job. If a person usually works the same number of hours at two jobs, the "main" job is the job at which the person has been employed the longest.

**Full time job:**

Any job that is usually performed for 35 hours or more per week is considered full-time. In some occupations, usual weekly schedules of less than 35 hours per week are considered to be full-time. For these cases, the option "normal hours are full time" is provided.

**Part time job:**

A job in which a person works less than 35 hours, unless the number of usual work hours is less than 35. In addition, a job is a part time job if the hours worked by a person were less than usual work hours in such job.

**Occupation:**

Occupation refers to the kind of work done during the reference period by the employed person, or the kind of work done previously if unemployed, irrespective of the Economic Activity or the employment status of the person. Occupations are grouped together mainly on the basis of the similarity of skills required to fulfill the tasks and duties of the job. Occupations are classified according to the International Standard Classification of Occupation (ISCO 1988).

**Economic Activity:**

Economic Activity refers to the activity of the establishment in which an employed person worked during the reference period, or last worked if unemployed. This activity is defined in terms of the kind of goods produced or services supplied by the unit in which the person works. Economic Activity activities are classified according to the unified commodity classification in the West Bank and Gaza Strip which is based on the International Standard Classification of All Economic Activities (ISIC Rev3).

**Absent from usual work:**

All those who were absent from their usual work during the reference week, due to illness, holiday, strike, curfew, lock-out, temporary work stoppage, or due to some other reasons.

**Seeking work:**

Seeking work is defined as having taken specific steps in the reference week to find paid employment or self-employment. Job seekers are classified into:

1. Available for work: A person ready to work if he\she is offered any job, and there is no reason preventing him\her from accepting such a job although he\she did nothing to get a job.
2. Actively seeking work: A person who is willing to work and is actively seeking work through reading newspaper advertisement, asking friends, registration at the labour exchange offices, or asking employers.

**Persons outside labour force:**

The population not economically active comprises all persons 15 years and over, who were neither employed nor unemployed accordingly to the definitions over.

**Years of schooling:**

The number of regular years of study completed successfully. Repetition years and irregular study or courses are not taken into account.

**Hours worked:**

Total number of hours actually worked during the reference period as well as overtime and time spent at the place of work on activities such as preparation of the workplace. Leaves, meal breaks and time spent on travel from home to work and vice versa are excluded from work hours.

**Monthly work days:**

Number of days at work during the month, excluding week-ends, holidays, sick and other paid or unpaid leaves. One hour of work in a given day is considered as one work-day, thus the half-day work on Thursdays, customary in Palestinian civil services, is accounted for as one a work-day in this survey.

**Daily wage:**

Cash net wage paid to the wage employee from the employer. Wages received in different currencies are converted into New Israeli Shiekles according to the exchange rate in the survey period

**Abbreviations:**

PT: Palestinian Territory

WB: West Bank

GS: Gaza Strip

PSUs: Primary Sampling Units

LF: Labor Force

SPSS: Statistical Package for Social Sciences

SAS: Statistical Analysis System

EAs: Enumeration Areas

## Main Findings

This chapter presents the main findings of the of labour force survey rounds in the Palestinian Territory. The results are based on four survey rounds conducted during 2002. These indicators reveal the most important characteristics of the Palestinian labour force and its components: employment, underemployment, and unemployment.

Also this chapter provides, the classical distribution of employed persons by industry, occupation, employment status and place of work.

The distribution of unemployed persons is classified by sex and years of schooling.

### 3-1 Labour Force Participation (ILO Standards):

The results indicated that the labour force participation rate was 38.1 percent in 2002, while it was 38.7 percent in 2001. The males participation rate reached 65.5 percent in 2002 compared to 66.8 percent in 2001.

As well, results reveal that the labour force participation rate for the age group 25-34 years was 51.3 percent; 86.3 percent for males and 15.1 percent for females. Also, the labour force participation rate for person's aged 35-44 years reached 53.6 percent; with 89.8 percent for males and 15.0 percent for females. On the other hand the percentage of persons aged 15-24 reached 24.4%; with 42.1 percent for males and 5.9 percent for females.

The distribution of labour force participation by region reveals the labour force participation rate in the West Bank reached 40.0 percent; with 67.2 percent for males and 12.4 percent for females. The results indicated that the labour force participation rate in Gaza Strip is much lower than in the West Bank. The rate in Gaza Strip reached 34.5 percent; with 62.2 percent for males and 6.5 percent for females.

### 3-2 Labour Force Participation (Relaxed Definition):

The results indicated that the labour force participation rate was 44.6 percent in 2002, while it was 45.2 percent in 2001.

the labour force participation by region reveals in the West Bank reached 46.3 percent in 2002, while it was 46.9 percent in 2001, and in Gaza Strip is much lower than in the West Bank. The rate in Gaza Strip reached 41.2 percent in 2002 while it was 42.1 percent in 2001.

### 3-3 Labour Force Status (ILO Standards):

The labour force survey results indicated that the average of unemployment rate in the Palestinian Territory increased from 14.1 percent in 2000 to 25.5 percent in 2001 to reached 31.3 percent in 2002. The male's unemployment rate reached 33.5 percent in 2002, against 27.3 percent in 2001. The corresponding figures for females 17.1 percent and 14.1 percent respectively.

Full employment rate in the Palestinian Territory for 2002 is 64.4 percent; of which 61.8 percent for males and 80.9 percent for females. The full employment rate in 2001 was 70.5 percent; of which 68.4 percent for males and 84.0 percent for females.

The distribution of labour force participants by region and labour force status indicates that in the West Bank 66.3 percent of labour force participants are full employed, 5.5 percent underemployed, and 28.2 percent unemployed. The corresponding figures for Gaza Strip are 60.2 percent; 1.8 percent and 38.0 percent in 2002.

Unemployment rate for females in the West Bank reached 14.0 percent and for males was 30.8 percent in 2002. The corresponding figures for females in Gaza Strip are 28.4 percent and for males was 39.0 percent in 2002.

### 3-4 Employment (ILO Standards):

The survey results indicated that in 2002, employed persons were distributed according to place of work 62.6 percent working in the West Bank, 27.1 percent working in Gaza Strip, and 10.3 percent working in Israel and Israeli Settlements.

Results revealed that 35.9 percent of employed persons are working in services, while 20.0 percent are working in commerce, hotels and restaurants. The results indicated also that services are the main field of employment for females; about 54.3 percent of employed women work in services. Agriculture provides job opportunities to about 29.9 percent of females in the West Bank and Gaza Strip.

As well, persons are distributed by employment status: 3.7 percent are employers, 26.8 percent are self employed, 59.2 percent are wage employees, while 10.3 percent are unpaid family members.

About 14.2 percent of employed persons are engaged in elementary occupations, while 17.5 percent are engaged as craft and related trade workers. Also, 23.8 percent work as professionals, technicians and clerks, and about 12.6 percent work as skilled agriculture workers.

The results reveal that 16.0 percent of males are working in elementary occupations, while 5.2 percent of females are working in this field. 19.0 percent of males, and 48.4 percent of females work as professional and technicians.

The survey results indicated that the overall average of monthly work days is 23.0 days, 22.8 for employees working in the West Bank and, 24.1 for those working in Gaza Strip, and 21.5 days for those working in Israel and Israeli settlements. The overall average weekly work hours is 41.1, of which 40.9 hours for employees working in the West Bank, and 40.0 hours for those working in Gaza Strip, and 43.9 work hours for wage employees working in Israel and Israeli settlements.

The overall median daily net wage is 60.0 NIS; of which 60.0 NIS in the West Bank, 50.0 NIS in Gaza Strip, while the wage is 115.4 NIS for those working in Israel and Israeli Settlements.

The survey results revealed a clear discrepancy between the wage of male employees and female employees. The median daily wage for male employees in the West Bank is 62.2 NIS, and 53.8 NIS for females. The corresponding figures in Gaza Strip are 50.0 NIS for males and 53.8 NIS for females.

The results indicated the differences in amount of median daily wage according to industry. The median wage for those working in agriculture in the West Bank is 50.0 NIS, 30.0 NIS in Gaza Strip and about 60.0 NIS in Israel and Israeli settlements. The highest wage of employees working in the West Bank is for those working in construction 80.0 NIS, the highest wage of employees working in Gaza Strip is for those working in Services and Other Branches 53.8 NIS.

### 3-5 Unemployment (ILO Standards):

The survey results revealed that the average unemployment rate in 2002 is 31.3 percent; 33.5 percent for males and 17.1 percent for females. Results revealed that unemployment is concentrated among the youth aged 15-24 years at 42.6 percent; of which 43.4 percent for males against 36.7 percent for females.

In addition, the unemployment rate in the West Bank reached 28.2 percent; 30.8 percent for males and 14.0 percent for females. The unemployment rate in Gaza Strip reached 38.0 percent; 39.0 percent for males, and 28.4 percent for females.

The highest unemployment rate by district was 41.1 percent in Rafah, Dire Al-Balah(39.9 percent), Khanyunis (38.5 percent), North Gaza (37.1 percent). While unemployment rate in Gaza was 36.0 percent.

In the West Bank, the highest unemployment rate was found in Jenin and Tubas (44.0 percent), Nablus and Salfit (29.4 percent),Jerusalem (27.8 percent), Hebron (26.7 percent), Ramallah and Al-Bireh (25.9 percent), Tulkarm and Qalqiliya (25.1 percent), then The lowest unemployment rate in Bethlehem and Jericho (17.9 percent).

The survey results indicated that 1.4 of the unemployed males and 1.0 percent of females had not completed one year of schooling. Conversely, about 65.7 percent of unemployed females and 10.6 percent of unemployed males have completed 13 or more years of schooling.

### **3-6 Unemployment (Relaxed Definition):**

The survey results revealed that the average unemployment rate in 2002 is 41.2 percent; 43.2 percent for males and 28.6 percent for females. In addition, the unemployment rate in the West Bank reached 38.1 percent, and 48.1 percent in Gaza Strip.

### **3-7 Persons Outside Labour Force (ILO Standards):**

The survey results indicated that about 61.9 percent of persons aged 15 years and over are not economically active, 34.5 percent for males and 89.6 percent for females. On the other hand, persons outside labour force are distributed accordingly 8.5 percent are old or ill, 52.0 percent are housekeeping, 29.0 percent are students, and 10.5 percent for other reasons.

The survey results indicated that 89.3 percent of persons who did not complete any year of schooling are outside labour force, 59.2 percent for those completed 1-6 years of schooling, and about 44.3 percent of those completed 13 or more years of schooling were outside labour force.

## Methodology

The methodology was designed according to the context of the survey, international standards, data processing requirements and comparability of outputs with other related surveys.

### 4-1 Questionnaire Design:

The questionnaire included four parts: one for recording necessary elements for survey management and controls, another part for identifying the sample households, one for recording the household roster and the demographic characteristics of household members, and one for recording labour force characteristics of working age household members.

### 4-2 Sampling Frame and Target Population:

#### Target Population:

All Palestinians aged 10 years and over living in the Palestinian Territory, excluding persons living in institutions such as prisons or shelters.

#### Sampling Frame:

The sampling frame consisted of a master sample of enumeration areas (EAs) selected from the population housing and establishment census 1997, the master sample consists of area units of relatively equal size (number of households), these units have been used as primary sampling units (PSUs).

#### 4-2-1 Sample Design:

The sample is a two-stage stratified cluster random sample.

#### Stratification:

Four levels of stratification were made:

1. Stratification by Governorates.
2. Stratification by type of locality which comprises:
  - (a) Urban
  - (b) Rural
  - (c) Refugee Camps
3. Stratification by classifying localities, excluding governorate centers, into three strata based on the ownership of households of durable goods within these localities.
4. Stratification by size of locality (number of households).

#### Sample Size:

The sample size in the 24<sup>th</sup> round consisted of 7,559 households, which amounts to a sample of around 26,820 persons aged 10 years and over (including 20,952 aged 15 years and over). In the 25<sup>th</sup> round the sample consisted of 7,559 households, which amounts to a sample of around 20,113 persons aged 10 years and over (including 15,765 aged 15 years and over), in the 26<sup>th</sup> round the sample consisted of 7,559 households, which amounts to a sample of around 22,182 persons aged 10 years and over (including 17,295 aged 15 years and over). In the 27<sup>th</sup> round the sample consisted of 7,559 households; which amounts to a sample of around 28,810 persons aged 10 years and over (including 22,513 aged 15 years and over). The sample size allowed for non-response and related losses. In addition, the average number of households selected in each cell was 16.

#### 4-2-2 Sample Rotation:

Each round of the Labor Force Survey covers all the 481 master sample areas. Basically, the areas remain fixed over time, but households in 50% of the EAs are replaced each round. The same household remains in the sample over 2 consecutive rounds, rests for the next two rounds and represented again in the sample for another and last two consecutive rounds before it is dropped from the sample. A 50 % overlap is then achieved between both consecutive rounds and between consecutive years (making the sample efficient for monitoring purposes).

In earlier applications of the LFS (rounds 1 to 11); the rotation pattern used was different; requiring a household to remain in the sample for six consecutive rounds, then dropped. The objective of such a pattern was to increase the overlap between consecutive rounds. The new rotation pattern was introduced to reduce the burden on the households resulting from visiting the same household for six consecutive times.

#### 4-2-3 Estimations Procedure:

To estimate a given total  $Y$  for a given sub-population  $A$ , we introduce the following formula:

$$(1) \quad \hat{Y} = \frac{y}{x} X$$

Where  $\frac{y}{x}$  is a ratio estimated from the sample and  $X$  is the total number of elements in the population related to the variable  $x$  in the denominator, usually  $X$  is taken from a recent census or from recent population projections.

The estimator for a given ratio for sub-population  $A$  is the following:

$$(2) \quad \hat{R}_A = \frac{\hat{Y}_A}{\hat{X}_A}$$

Where:

$\hat{R}_A$  = The estimate for the ratio of two variables,  $Y/X$ , in sub-population  $A$ .

$\hat{X}_A$  = The estimated total for variable  $X$  in sub-population  $A$ , given by formula (1)

$\hat{Y}_A$  = The estimated total for variable  $Y$  in sub-population  $A$ , also given by formula (1)

Means and proportions are special types of ratios. In the case of the mean, the variable  $X$ , in the denominator of the ratio, is defined to equal 1 for each element so that the denominator is the sum of the weights in the sub-population.

In the case of proportions, the variable  $X$  in the denominator is also defined to equal 1 for all elements. But, in addition, the variable  $Y$  in the numerator is binomial and is defined to equal either 0 or 1, depending on the absence or presence, respectively, of a specified attribute in the element observed.

#### 4-2-4 Calculation of Variances:

It is very important to calculate standard errors for the main survey estimates so that the user can have an idea of their reliability or precision.

The variance calculation uses the method of ultimate clusters. Within any domain of estimation, for a sub-population  $A$ , and for a characteristic  $Y$ , the formulas are:

(a) The variance of an estimator of a total is estimated by:

$$(3) \quad V\left(\hat{Y}_A\right) = \sum_h \left[ \frac{n_h}{n_h - 1} \sum_{i=1}^{n_h} \left( \hat{Y}_{Ahi} - \frac{\hat{Y}_{Ah}}{n_h} \right)^2 \right]$$

Where:

$$(4) \quad \hat{Y}_{Ahi} = \sum_{j \in A} W_{hij} Y_{hij}$$

and:

$$(5) \quad \hat{Y}_{Ah} = \sum_i \sum_{j \in A} W_{hij} Y_{hij}$$

The expression in (3) is an unbiased estimator of the Variance.

(b) The variance of an estimator of a ratio is estimated by:

$$(6) \quad V\left(\hat{R}_A\right) = \frac{1}{\hat{X}_A^2} \left[ V\left(\hat{Y}_A\right) + \hat{R}_A^2 V\left(\hat{X}_A\right) - 2 \hat{R}_A \text{COV}\left(\hat{X}_A, \hat{Y}_A\right) \right]$$

Where:

$$\text{COV}\left(\hat{X}_A, \hat{Y}_A\right) = \sum_h^{\text{Dom}} \frac{n_h}{n_h - 1} \sum_{i=1}^{n_h} \left( \hat{X}_{Ahi} - \frac{\hat{X}_{Ah}}{n_h} \right) \left( \hat{Y}_{Ahi} - \frac{\hat{Y}_{Ah}}{n_h} \right)$$

And:

$V(\hat{Y}_A)$  and  $V(\hat{X}_A)$  are calculated according to formula (3);

$\hat{X}_A$  is calculated according to formula (1) and  $\hat{R}$  according to formula (2).

#### 4-3 Pilot Survey:

A pilot survey for the first round was conducted in May 1995 on the basis of about 90 households in the West Bank. It covered main types of households encountered in the full-fledged survey. Thus, it included households from urban areas, from Rural, and from refugee camps, households engaged in self-employment activities, as well as in paid employment, households in the informal sector as well as the formal sector and educated respondents as well as illiterates.

On the basis of the results from the first round in September-October, 1995, the survey questionnaire and the fieldwork forms and procedures were reviewed and modified in order to assure the collection of accurate data.

#### **4-4 Training and Recruitment:**

The purpose of the training courses was to teach participants the main skills needed to conduct interviews. Two training courses were held, one in Ramallah for the West Bank trainees, and one in Gaza City for Gaza Strip trainees. Each course consisted of two parts: one on survey methodology including survey design, questionnaire design, interviewing techniques, and field operations; and one part on specifications of the labour force survey, including concepts and definitions, fieldwork procedures, data collection, editing, coding, tips for asking questions and recording answers, as well as field team organization and field supervision.

The training courses included lectures and field exercises. Each course lasted 3 days, training 11 interviewers and 4 supervisors.

#### **4-5 Fieldwork:**

The preparation phase for the LFS included recruiting and training of interviewers and supervisors. The staff on this project participated in previous survey projects at PCBS, and are highly qualified.

The West Bank was divided into three areas (North, Middle and South), each of which was supervised by one field supervisor. Each region consists of a number of districts, and the fieldwork was carried out by one fieldwork team, consisting of 2-3 interviewers.

Gaza Strip was also divided into three areas (North, Middle and South). Fieldwork activities were carried out by one fieldwork team, each consisting of a supervisor, an editor and 3 interviewers.

Special procedures were followed in order to ensure quality control and efficient organization of fieldwork. Such procedures are important for supervising work, as well as for receiving and delivering questionnaires, maps, sample lists in addition to other forms used for management and quality control.

Field operations were conducted in the Palestinian Territory from 14/01/2002 to 4/01/2003. Fieldwork teams were distributed to each area on the basis of the sample size. The number of LFS' fieldwork team was 18, including the fieldwork coordinator, 4 supervisors, 3 editors, and 10 interviewers including coders.

#### **4-6 Data Processing:**

The data processing stage consisted of the following operations:

- 1. Editing before data entry**

All questionnaires were then edited in the main office using the same instructions adopted for editing in the field.

- 2. Coding**

At this stage, the Economic Activity variable underwent coding according to West Bank and Gaza Strip Standard Commodities Classification, based on the United Nations ISIC-3. The Economic Activity for all employed and ever employed individuals was classified at the fourth-digit-level. The occupations were coded on the basis of the International Standard Occupational Classification of 1988 at the third-digit-level (ISCO-88).

### **3. Data Entry**

In this stage data were entered into the computer, using a data entry template BLAISE. The data entry program was prepared in order to satisfy the following requirements:

- Duplication of the questionnaire on the computer screen.
- Logical and consistency checks of data entered.
- Possibility for internal editing of questionnaire answers.
- Maintaining a minimum of errors in digital data entry and fieldwork.
- User- friendly handling.

**Note:** The sample weights were revised according to the most recent population estimates, population age-sex structure and place of residence. New sample weights have been calculated.

## Chapter Five

### Data Quality

Since the data reported here are based on a sample survey and not on a complete enumeration, they are subjected to sampling errors as well as non-sampling errors.

Sampling errors are random outcomes of the sample design, and are, therefore, in principle measurable by the statistical concept of standard error. A description of the estimated standard errors and the effects of the sample design on sampling errors are provided in the previous chapter.

Non-sampling errors can occur at the various stages of survey implementation whether in data collection or in data processing. They are generally difficult to be evaluated statistically. They cover a wide range of errors, including errors resulting from non-response, sampling frame coverage, coding and classification, data processing, and survey response (both respondent and interviewer-related). The use of effective training and supervision and the careful design of questions have direct bearing on limiting the magnitude of non-sampling errors, and hence enhancing the quality of the resulting data. The following are possible sources of non-sampling errors:

- Errors due to non-response because households were away from home or refused to participate. The overall non response rate amounted to almost 21.0% which is relatively low; a much higher rates is rather common in an international perspective. The refusal rate was only 0.5%. It is difficult however to assess the amount of bias resulting from non response. The PCBS has not yet undertaken any non-response study. Such a study may indicate, that non-response is more frequent in some population groups than in others. This is rather normal and such information is necessary to be able to compensate for bias resulting from non-response errors.
- Households interviewed in a week different than the reference week. All households were interviewed in the reference week in this survey.
- Errors in data processing, such as coding and punching. The data underwent checking and completion of missing information in the office and logical checks were computerized as well as manually, including call-backs if needed.
- Response errors which resulted from misunderstanding of the questions, interviewers' bias in asking the questions and in probing. Thorough training, supervision, and various quality control checks were used to minimize bias resulting from these kinds of errors.

The demographic data, including the sex ratio by age were computed and found generally reasonable and consistent with those found from other sources. These results and the various checks for external validity indicate that the survey data are of a high quality.

The non-response rate was between 11%-13% before October 2000. Since that time, and after the Israeli aggression on the Palestinian Territory (the curfew and closure), the rate increased to reach 40% in some rounds.

The main technical problem when this type of this non-response occur is the bias in estimating the main indicator of LFS (Unemployment rate). The closure and curfew have a strong influence on the unemployment rate, and when we putting aside the closure area, then will be there a bias for the open area. So, the unemployment rate estimation will be less than the actual rate.
