

Differences between SLMPS 2022 v2.2 & v2.4

The changes between the ILMPS 2025 v7.0 and v8.0 datasets are limited to 2 variables. The reasons for these changes, along with the number of mismatched observations, are illustrated below:

hrwgAllJob: There was an issue with the calculated duration of secondary jobs for some observations in v2.2, which has been corrected in v2.4.

mnthwgAllJob: The duration should be divided by 3 to obtain the monthly value. This adjustment was not applied in v2.2 but has been correctly implemented in v2.4. The mismatches for this variable are 3771 observations between v2.2 and v2.4.
